11.Read ten numbers and print their sum and product

```
          Main
           |
   Integer number
           |
    Integer total
           |
 Integer multiplication
           |
   Integer counter
           |
       total = 0
           |
   multiplication = 1
           |
      counter = 1
           |
    counter<=10  ──True──> Output "Enter number"
      |                         |
    False                  Input Number
      |                         |
      |                   total = total+number
      |                         |
      |                   multiplication =
      |                   multiplication*number
      |                         |
      |                   counter = counter+1
      |                         |
      |<───────────────────────
      |
 Output "Total of numbers"
           |
      Output Total
           |
 Output "Multiplication of
        numbers"
           |
  Output Multiplication
           |
          End
```
